PROFESSIONAL
DICTATION
SYSTEMS

The sound
of success

“For millions of years mankind lived just like the animals. Then something happened which unleashed the power of our imagination. We learned to talk.”

Stephen Hawking

Thoughts into words

OLYMPUS | PROFESSIONAL
DICTATION
SYSTEMS

With Professional Dictation Systems, Olympus ensures that the wisdom of our brightest minds remains to hand at all times, wherever work takes you. Success begins when your team puts their thoughts into words.

Olympus Professional Dictation Systems combine the latest technology with simple-to-use interfaces to ensure your human resources are in perfect harmony with company workflows and tools – any time, anywhere, for all business processes.

Understanding your professional needs

Your success never sounded better.

Thoughts come to life and transfer the knowledge at the heart of your business when they are spoken. Reliable and clear communication is the true source of success in today's professional world.

Olympus – a world leader

Olympus has been one of the market leaders for integrated audio solutions at the enterprise level for a long time.

With extensive experience in the field, Olympus understands the needs of businesses of all sizes. Clients in sectors such as Government, Healthcare and Law have come to depend on Olympus for long-term sustainability and high-tech precision.

After firmly establishing a reputation for innovative solutions tailored to meet specific demands, Olympus successfully created the perfect 360° solution: Professional Dictation Systems.

Our aim

At Olympus we aim to make life simpler and more efficient for people. Our high-end products and solutions are impressive, but we never forget that you and your business are our core focus. A new era of dictation has arrived. With Olympus Professional Dictation Systems, today's audio notation is about more than just premium hardware. It's also about organising efficient workflows to exchange and process the valuable thoughts and knowledge you have in mind.

What we deliver to you

As a respected international brand with a solid global presence encompassing all European countries, Olympus understands your specific needs. Naturally, every Professional Dictation Systems component is designed to meet your demanding dictation requirements by providing the superior quality that is the Olympus hallmark.

Olympus' first-class dictation devices are integrated with robust cross-platform solutions so that you can use your existing network to easily share and process audio files with a team of transcribers, a colleague or throughout a corporation.

Speak to the experts

With Olympus, the entire process is in safe hands; from initial thoughts to the spoken word and the process of documentation for your records. Olympus Professional Dictation Systems are distributed exclusively via a network of authorised digital dictation specialists. Olympus draws on the expertise of these hand-picked specialists to meet your every demand by providing customised advice and consultation on the ground. Real people, real solutions.

Clients in sectors such as **Government, Healthcare and Law** have come to depend on Olympus for long-term sustainability and high-tech precision.

A faster world needs better solutions.

The evolution from analogue to digital recording is a story of continual improvement, so it's essential that professionals in every field make a seamless transition into digital technology. Olympus Professional Dictation Systems solutions help to do just that... and more.

Efficiency at your fingertips

The average human speaks seven times faster than they can write. But no matter how fast you talk, Olympus can keep up. Analogue belongs to the past, and it's time to get up to speed. With the whole industry moving towards digital, don't be left at a disadvantage by putting up with outdated technology.

Speed up your business

Before digital dictation was an option, most offices gave their rush jobs to their fastest typist. To type at 95 words per minute was impressive, and a 90-minute tape could be transcribed in only a few hours. But if a team of typists could work on the same amount of audio simultaneously, the job could be done in under half an hour.

Clutter control

Switching to digital saves money and space. For every 1GB of memory space, modern Olympus devices can record more than six days of non-stop high quality audio. You would need approximately more than 100 analogue microcassettes to hold the same amount of information.

Think smarter

Going digital means it's easy to insert sections or add notes and comments to a dictation after the fact. This makes it simple to collect and review thoughts so you can continually improve your final result. It also means that the high cost and last-century speed of shipping cassettes has been erased.

Be in sync

With email, FTP or remote access to your network, an audio file can be on your colleague's desktop or at an external secretary's office in mere seconds. With that kind of speed, Olympus Professional Dictation Systems will significantly upgrade your turnaround times.

Secure records

Superior digital quality and constant improvements to encryption technology make digital archiving the safest and clearest method to document important voice records.

World-leading innovations

1969: World's first microcassette recorder

As the world's leading brand for unparalleled dictation and transcription solutions, Olympus has a lot to be proud of. It all started in 1969 when Olympus unveiled the world's first microcassette recorder. The Zuiko Pearlcorer offered portability and ease of use, and it instantly revolutionised the way that doctors, lawyers, journalists and people in countless other professions worked. In no time at all, it became the benchmark for anyone who needed a recording device for dictation and transcription purposes or a speech to text system for interviewing or recording meetings.

1997: First professional digital recorder

After inventing the microcassette, Olympus once again caught the imagination with the introduction of its first digital recorder. As with the Pearlcorers, the Olympus digital range has gone on to win numerous design honours due to its perfect combination of functionality and good looks. Add our powerful software solutions, and there's no better dictation system available.

Whether you need an entry level digital recorder or complete integrated solutions from the top-of-its-class Professional Dictation Systems range, Olympus has the answer. With Olympus, your success has never sounded better.

Over 40 years of innovation

Sharing your knowledge

When it comes to digital recording solutions, Olympus sets the benchmark for business. Professionals across the globe know the Olympus brand stands for quality. That's why Olympus significantly outsells any other company in the field of mobile hand-held digital dictation.

Based on real improvements

The success of Olympus' digital dictation solutions is simple: Olympus technology contributes to better results in many areas of business. For example, current research demonstrates that automation of patient records in hospitals leads to significant reductions in mortality rates and costs. It also helps to improve the overall health of patients.*

Superior business dictation solutions

With Olympus dictation devices it is easy to edit high quality sound files on the go, on a desktop computer or a laptop. At the touch of a button, the recorders can create index markers or verbal comments, define work types and set priorities for easy dictation management.

Keep your business running smoothly

On the back-end, implementation with your existing network is always trouble-free and, because Olympus software requires very little maintenance, your IT department can focus on other things. Because voice data is kept in a centralised system, administrators can easily monitor and control the flow of

information in order to guarantee stability and keep your business running smoothly and safely.

Erasing the learning curve

The award-winning Olympus Professional Dictation Systems illustrate perfectly why that's the case. Each high-performance dictation device is easy to use and made to look great. The recorders' rugged casings are ergonomically designed to fit comfortably in your hand, no matter where your business takes you.

And their user interfaces are simple to navigate – there's hardly any learning curve at all. Whether you're using a Professional Dictation Systems model that records directly to a PC, or transferring and emailing files from a mobile device to the network, you'll appreciate how easy and successful your life has become.

Digital Dictation pays for itself

Time-consuming processes will become a distant memory. This means you'll quickly see a return on investment as the system pays for itself and frees up funds for other investments. By designing the Professional Dictation Systems range to adapt to your own specific needs, your workflow becomes more efficient than ever before. Good for you. Good for your business.

*Arch Intern Med. 2009;169(2):108-114

We aim to make life simpler and more efficient for people – we never forget that **you and your business are our core focus.**

21st century professionals demand flexible and compliant solutions they can trust, **wherever their business takes them.**

Fast, secure solutions

Peace of mind.

In the 21st century, it's crucial to protect your investment on multiple levels. Failsafe security is essential, especially when it comes to the compliance and trust requirements of your business partners. That's why Professional Dictation Systems offer numerous features that ensure peace of mind for you – and them.

What really matters

Olympus prides itself in knowing that every solution it produces offers solid dependability. Its Professional Dictation Systems are no different. Each element is an example of the absolute latest technologies, exceeding expectations with robust functions that let you focus on the things that really matter.

Latest industry standard

Since Olympus was one of the architects of the industry standard DSS technology, the sound quality from its DSS Pro professional digital recorders delivers crystal clear dictation files for transcription and speech recognition. In addition, you can archive your recordings without any quality loss, which means they are safely preserved for the future. All that while reducing the load on your IT infrastructure and delivering the best security in the business.

Data security

For many professionals, voice data needs to remain hush-hush. In today's business world, confidentiality is more important than ever before. As a starting point, the system can be seamlessly integrated into the security architecture of your network. Then the audio stored on your centralised network can easily be protected by providing unique user IDs. Moreover, the controls on each digital dictation device make it virtually impossible to accidentally erase any of the data you've recorded.

In addition, Professional Dictation Systems recorders and software have high-tech features such as security locks, password protection and the ability to encrypt and decrypt audio files. For absolute discretion, a unique state-of-the-art biometric fingerprint lock function recognises you and ensures that only you can provide access to the valuable information saved on your recorder.

Reliability in your hands...

...and on your network. Olympus' reputation as a leading cross-platform supplier is outstanding in the digital dictation solution industry, ensuring that your workflow is effectively handled today and tomorrow.

Integrated solutions

In a networked world you need the ability to sync up with networked information whenever it suits you. With traditional recording technologies, that was impossible. With Olympus Professional Dictation Systems, it became the standard. They provide integrated solutions ideally suited for taking dictation, keeping audio notes and capturing conference presentations.

One step ahead

Olympus Professional Dictation Systems are also extraordinarily flexible because they can be combined with powerful accessories like the Olympus barcode scanner which helps to incorporate voice data into existing information management solutions. Thereby Olympus constantly stays one step ahead, developing interfaces today that ensure users are able to benefit from future innovations.

Always running smoothly

But what really makes Olympus Professional Dictation Systems impressive is that the range is tailored to improve the lives of the people behind the scenes. Its cross-platform software works harmoniously on all leading network architectures. And because files are centrally located and managed, your IT department can be sure that things are always running smoothly. With features like these, it makes it easy for managers to keep overhead costs down, revenue flowing in and a smile on the faces of IT administrators.

Stable platform for the future

Professional Dictation Systems ensure a stable platform for today's professional requirements. And, because Olympus believes in planning for the future, Professional Dictation Systems solutions are ready for what tomorrow brings by ensuring that the technology is compatible with all leading platforms.

Olympus constantly stays one step ahead, developing interfaces today that ensure **users** are able to benefit from future innovations.
